

Create your own Bird art

Check out these Folk Art designs

Hello! I am a Forest Wagtail

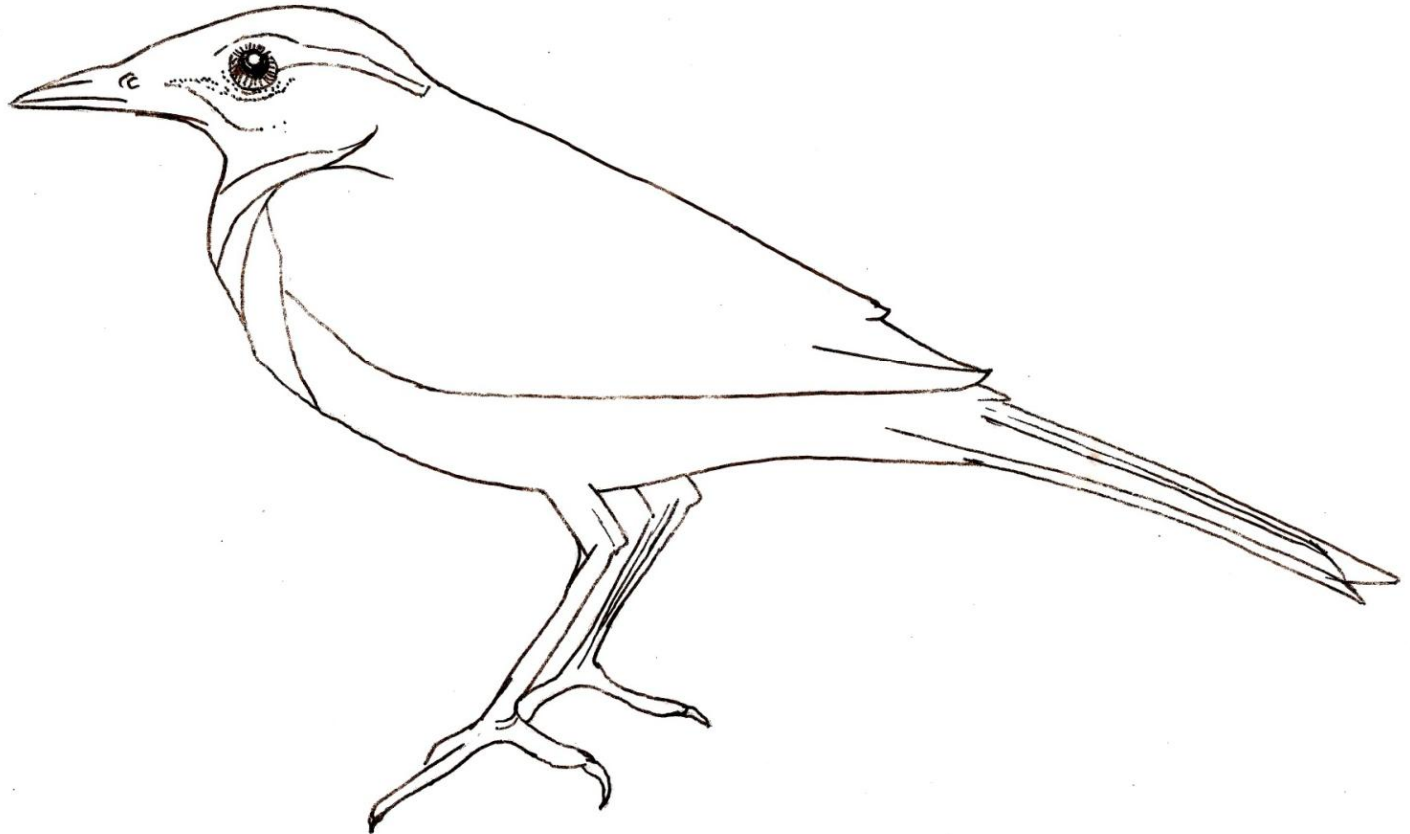

Illustration: Abhisheka Krishnagopal

Did you have a look at the painting of the Forest Wagtail? Why not create your own Forest Wagtail art?

Need help?

- Look at the folk art designs...
- Use few or all of those designs / create your own designs...
- Fill the bird outline you see below..

The Forest Wagtail gets its name because of its tail wagging behavior.

- How does the bird wag its tail?
 - Side to side
 - Up and down
- What do you think this bird eats?
 - Fruits
 - Insects
 - Seeds
- Where do you think the bird lives?
 - Wetland
 - Grassland
 - Woodland
- Do you think we can see to this bird all through the year in India?
 - Yes
 - No

For educators

- Of all the wagtails, Forest wagtail is the only bird species that moves its tail side to side.
- Seen mostly in forested areas, in areas where the forests are cleared or near plantation this bird can also be seen on the ground looking for insects in the leaf litter while wagging its tail.
- This species is migratory to India and spends the winter season in South India.
- This is the only wagtail known to nest in trees.
